Reply to Office Action of March 26, 2009 Atty Docket No.: 60136.0095USD2

IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the

application:

1. (Currently Amended) A hardware upgrade for a set top terminal for use with a

television program delivery system with menu selection of programs, the set top terminal

having a microprocessor and microprocessor instructions for prompting generation of menus,

the hardware upgrade comprising:

an interface for communicating with a microprocessor of to the set top terminal for

receiving and processing subscriber input provided by the microprocessor of the set top

terminal and providing data to the microprocessor of the set top terminal;

a modem connected to the interface for communicating with one or more headends.

wherein the set top terminal receives television program signals based on the subscriber input

received from the microprocessor of the set top terminal; and

a hardware upgrade microprocessor connected between coupled to the interface and

the modem for providing enhanced functional capabilities to the set top terminal [[,]]; and

memory, coupled to the hardware upgrade microprocessor, for storing data therein:

wherein the hardware upgrade is a card insertable into a card receiving slot of the set

top terminal to add a data modulation and demodulation function to the set top terminal such

that data may be retrieved from the one or more headends and stored in local storage the

memory, wherein the data comprising information from an interactive service for accessing

an on-line database thereby allowing a user to use the set top terminal to engage in actual

transactions using two-way communications over the modem with the interactive service via

submenus, and the interface to the set top terminal comprises:

Reply to Office Action of March 26, 2009 Atty Docket No.: 60136.0095USD2

interactive software stored in the memory of said hardware upgrade and processed by

the hardware upgrade microprocessor to provide enhanced functional capabilities for the set

top terminal; and and to process subscriber inputs received from the set top terminal via the

interface associated with the enhanced functional capabilities

processing circuitry to process said subscriber inputs associated with said interactive

software.

2-3. (Canceled).

4. (Previously Presented) The hardware upgrade of claim 1 wherein the

modem is capable of communicating with the interactive service.

(Original) The hardware upgrade of claim 4 wherein the interactive

service is outside of the television program delivery system.

6. (Original) The hardware upgrade of claim 4 wherein the interactive

service is selected from a group consisting of home shopping, airline reservations, news,

financial information, classified advertisements, home banking, and interactive teletext.

(Previously Presented) The hardware upgrade of claim 1 wherein the

modem is capable of communicating with the on-line database.

8. (Original) The hardware upgrade of claim 7 wherein the on-line database

is outside of the television program delivery system.

9. (Original) The hardware upgrade of claim 7 wherein the on-line database

contains data concerning one or more applications selected from a group consisting of home

shopping, airline reservations, news, financial information, classified advertisements, home

banking, and interactive teletext.

10-13. (Canceled).

14. (Currently Amended) A set top terminal for use with a television program

delivery system with menu selection of programs, the set top terminal having a

microprocessor and microprocessor instructions for prompting generation of menus and

comprising:

a receiver adapted to receive programs; and

a first hardware upgrade comprising:

an interface for communicating with a microprocessor of to the set top

terminal for receiving and processing subscriber input $\underline{\text{provided by the microprocessor of the}}$

set top terminal and providing data to the microprocessor of the set top terminal;

a modem connected to the interface for communicating with one or more

headends, wherein the set top terminal receives television program signals based on the

subscriber input $\underline{\text{received from the microprocessor of the set top terminal}};$ and

a hardware upgrade microprocessor connected between coupled to the

interface and the modem for providing enhanced functional capabilities to the set top

terminal [[,]]; and

memory, coupled to the hardware upgrade microprocessor, for storing data

therein;

Reply to Office Action of March 26, 2009

Atty Docket No.: 60136.0095USD2

wherein the first hardware upgrade is a card inserted into an expansion card slot of

the set top terminal to add a data modulation and demodulation function to the set top

terminal such that data may be retrieved from the one or more headends and stored in a local

storage the memory and the terminal has an expansion eard slot,

wherein the interface comprises at least one card connector adapted for use with the

expansion card slot, and

wherein the data comprising information from an interactive service for accessing an

on-line database thereby allowing a user to use the set top terminal to engage in actual

transactions using two-way communications over the modem with the interactive service via

submenus.

15-17. (Canceled).

18. (Original) The terminal of claim 14 wherein the terminal is an HDN

terminal.

(Original) The terminal of claim 14 further comprising:

one or more additional hardware upgrades connected to the terminal.

20-22. (Canceled).

23. (Original) The terminal of claim 19 wherein at least one of the one or

more additional hardware upgrades is selected from the group consisting of an audio program

reception hardware upgrade, an interactive hardware upgrade that receives interactive

subscriber input and produces interactive output, and a storage hardware upgrade.

24. (Currently Amended) A system comprising:

a television program delivery system adapted to deliver television program signals;

and

a set top terminal having a microprocessor and microprocessor instructions for

prompting generation of menus and comprising:

a receiver adapted to receive at least some of the television program signals; and

a hardware upgrade comprising:

an interface for communicating with a microprocessor of to the set top

terminal for receiving and processing subscriber input provided by the microprocessor of the

set top terminal and providing data to the microprocessor of the set top terminal;

a modem connected to the interface for communicating with one or more

headends, wherein the set top terminal receives the television program signals based on the

subscriber input received from the microprocessor of the set top terminal; and

a hardware upgrade microprocessor eonnected between coupled to the

interface and the modem for providing enhanced functional capabilities to the set top

terminal [[,]]; and

memory, coupled to the hardware upgrade microprocessor, for storing data

therein;

wherein the hardware upgrade is a card inserted into a card receiving slot of

the set top terminal to add a data modulation and demodulation function to the set top

terminal such that data may be retrieved from the one or more headends and stored in a local

storage the memory, wherein the data comprising information from an interactive service for

accessing an on-line database thereby allowing a user to use the set top terminal to engage in

Reply to Office Action of March 26, 2009 Atty Docket No.: 60136.0095USD2

actual transactions using two-way communications over the modem with the interactive

service via submenus, and

wherein the television program delivery system is a cable television program

delivery system comprises an operations center, the operations center transmitting one or

more of the programs to the terminal one or more headends and wherein a particular one of

the one or more headends transmitting one or more of the programs to the $\frac{\text{terminal}}{\text{hardware}}$

upgrade.

25-27. (Canceled).

28. (Original) The system of claim 24 wherein the television program

delivery system is a satellite broadcast system.

29. (Original) The system of claim 24 wherein the terminal is an HDN

terminal.

30-41 (Canceled)

42. (Currently Amended) A method for delivering television programs through a

television program delivery system with menu selection of programs, comprising:

receiving a television program from one or more headends;

receiving subscriber input through an a set top terminal interface within a set top

terminal, the set top terminal having a microprocessor and microprocessor instructions for

prompting generation of menus;

receiving communicating through a modern with the one or more headends using a

hardware upgrade having a hardware upgrade microprocessor inserted into a card receiving

slot of the set top terminal, the hardware upgrade providing an interface for communicating

with the microprocessor of to the set top terminal for receiving and processing subscriber

input provided by the microprocessor of the set top terminal and for providing data to the

microprocessor of the set top terminal, adding providing a data modulation and demodulation

function using the hardware upgrade microprocessor to the set top terminal communicate

with one or more headends, and the communicating step comprising; to receive television

program signals data based on the subscriber input received by the hardware upgrade

microprocessor from the microprocessor of the set top terminal, passing received data to the

set top terminal via the interface, providing enhanced functional capabilities to the set top

terminal using the hardware upgrade microprocessor, allowing a user to use the set top

terminal to engage in actual transactions using two-way communications through the data

modulation and demodulation and

transmitting data based on the subscriber input;

receiving data from the one or more headends; and

downloading data from the one or more headends to a local storage using the

hardware upgrade and the modem;

displaying television program and/or information based on the received data-

providing a second upgrade to said set top terminal for storing digital data on a

storage device, wherein the received data comprises information concerning the television

program, and

monitoring the information concerning the television program; and

Reply to Office Action of March 26, 2009

Atty Docket No.: 60136.0095USD2

retrieving the stored digital data, in response to the monitoring step wherein the data

comprising information from an interactive service for accessing an on-line database thereby

allowing actual transactions using two-way communications over the modern with the

interactive service via submenus.

43. (Original) The method of claim 42 wherein the received data comprises

information concerning the television program.

44. (Canceled).

45. (Currently Amended) The method of claim 42 wherein the eommunicating

step providing a data modulation and demodulation function using the hardware upgrade

microprocessor to communicate further comprises:

communicating with at least one interactive service.

46. (Original) The method of claim 45 wherein the interactive service is

outside of the television program delivery system.

47 (Original) The method of claim 45 wherein the interactive service is

selected from a group consisting of home shopping, airline reservations, news, financial

information classified advertisements, home banking, and interactive teletext.

48. (Currently Amended) The method of claim 42 wherein the communicating

step providing a data modulation and demodulation function using the hardware upgrade

microprocessor to communicate further comprises:

Reply to Office Action of March 26, 2009 Atty Docket No.: 60136.0095USD2

communicating with at least one on-line database.

49. (Original) The method of claim 48 wherein the on-line database is outside

of the television program delivery system.

50. (Original) The method of claim 48 wherein the on-line database contains

data related to one or more applications selected from a group consisting of home shopping,

airline reservations, news, financial information, classified advertisements, home banking,

and interactive teletext.

51-55. (Canceled)

56. (Currently Amended) The method of claim 42 wherein the stored received

digital data concerns one or more applications selected from a group consisting of games,

education, encyclopedias, reference, and economics.

57-58. (Canceled)

59. (Original) The method of claim 42 further comprising:

generating a menu on a television, wherein the subscriber input comprises menu

selections.

60-65. (Canceled)
